

SINGLE HURDLE WITH 180° SPIN BOTH DIRECTIONS

To improve muscular power and increase performance for explosive activity

PHYSICAL

Conditioning

Strength and Power

Set up a hurdle for each player. Player stands side on to the hurdle with feet shoulder width apart. Player bounds laterally with both feet over the hurdle spinning 180 degrees and immediately jumps back with a second 180 degree spin to finish in the original starting position. Repeat continuously for 30 seconds or set a number of repetitions. Monitor workload. Quality is more important than quantity. Players should explode upwards as quickly as possible after the feet touch the ground (minimise ground contact time). Correct landing technique is essential to prevent injury and improve performance in lower body. The shoulders must remain in line with the knees (centre of gravity over the body's base of support). Rest and repeat.

VARIATIONS AND PROGRESSIONS

Each practice can be varied to adapt to the needs of players. Simple changes can increase or decrease the challenge. Examples such as changing the rules, the size of the area, overloading the advantage of one team, varying the focus, or setting team challenges will keep players motivated and all attribute to good coaching methodology.

LEARNING OUTCOMES

- Ability to maintain short bursts of power or repeat high intensity movements in quick succession followed by periods of rest or low activity.
- Improve basic agility enabling players to accelerate, decelerate and change direction quickly while maintaining speed, body control and poise.
- Improve coordination, balance and foot speed.
- Players will gain power and strength for movements such as jumping, tackling, striking the ball and heading.
- Players will improve their maximum speed, agility and quickness.
- To increase the capacity of muscle efficiency specifically used in football for prolonged periods.
- To maintain overall quality of performance.

KEY FACTORS

- Correct foot placement
- Drive legs forward with each stride
- Explosive movements
- Good form (correct technique)
- Keep head and eyes up
- Maintain a strong core
- Rhythm

FOCUS AREAS

- Actions should be performed at high speed with maximum intensity while maintaining good technique and high quality.
- Ensure players generate power through the arms along with the leg action and that they don't hang arms down by the side of the body.
- Ensure that players are using the correct sprinting action and are alert at all times.
- Ensure that the players return to the correct running form/mechanics after returning the ball.
- Ensure training is specific to football when possible.
- Increase workload (intensity) gradually and progressively - the level of intensity of each exercise should be sufficient to gradually produce overload.
- Players must work with a slight knee bend and lift their knees before moving their feet.
- Rhythm is essential - players should not be hesitant or be stop-start.
- Strong arm drive with correct arm technique is a critical part of movement mechanics.
